References

- B270009: B-27 Supplement (50X) is evaluated for the ability to support the viability of Primary Rat Hippocampus Neurons. Each lot is tested for 10 days using Primary Rat Hippocampus Neurons grown in Neurobasal + B-27 Supplement (50X). On day 10 cells will be stained using a Cell Viability Indicator component from a Neurite Outgrowth Staining Kit. Plate will be read on a Fluorescent Plate Reader collecting RFU values then converted into a percentage format. Test B-27 Supplements must be > or = 80% of the control to be acceptable.
