Product Specific Information

Reconstitute in 50 µL sterile water. Centrifuge to remove any insoluble material. Store lyophilized antibody at 2-8 °C. It is recommended that a thawed sample is stored at 4 °C for no longer than 2 weeks. Allocation of appropriate anti-bacterial agent can increase shelf life by several weeks. Diluted serum should be prepared as required. Long term stability requires storage, preferably in small aliquots at -20 °C or lower. Glycerol (1:1) can be added to neat serum for additional stability if intended use does not prevent this.
