Control Medium: Potato Dextrose Agar

A satisfactory result is represented by recovery of positive strains equal to or greater than 70% of the control medium from an inoculum of 10-100 colony-forming units (cfu). Negative strains are inhibited from an inoculum of 1E+04 to 1E+06 cfu. For mould species, a satisfactory result is represented by typical colonial morphology as described in the product specification. Refer to product specification for full details.
