QUALITY CONTROL

Parameter	Method	Requirement	Result
Functional testing (Relevant kit components)	10-fold dilutions of cultured cells are lysed and treated with DNase. Lysates are used in one-step RT-PCR and a two-step RT-PCR reactions with hTBP and armored RNA primer/probe systems.	Meets predetermined specification	Pass
Nonspecific Endonuclease Activity (Relevant kit components)	A sample is incubated with supercoiled plasmid DNA and analyzed by agarose gel electrophoresis.	Meets predetermined specification	Pass
Exonuclease Activity (Relevant kit components)	A sample is incubated with labeled doublestranded DNA, followed by PAGE analysis.	Meets predetermined specification	Pass
RNase Activity (Relevant kit components)	A sample is incubated with labeled RNA and analyzed by PAGE.	Meets predetermined specification	Pass
Protease testing (Relevant kit components)	A sample is incubated with protease substrate and analyzed by fluorescence.	Meets predetermined specification	Pass
