### QUALITY CONTROL

| Parameter                                   | Method   | Requirement    | Result   |
|---|--|----------------|----------|
| Concentration                               | One unit is defined as the amount of enzyme required to digest 1 µg of lambda DNA/HindIII fragments in 1 hour at 37 °C in 50 µL of assay buffer.   | 5 - 6 U/µL     | Conforms |
| Endo-exodeoxyribonucleases and phosphatases | Incubation of single stranded and double stranded labeled oligonucleotides with appropriate amount of enzyme for 4 hour at 37 °C in assay buffer.  | Not detectable | Conforms |
| Star Activity                               | After 160-fold overdigestion (10 U/µg lambda DNA for 16 hours at 37 °C) with enzyme the fragmentation pattern is analysed. No detectable changes compared to the theoretical fragmentation pattern are considered as absence of star activity. | Not detectable | Conforms |
